

# Laser Therapy and Otitis

Laser therapy provides a non-invasive, pain-free, surgery-free, drug-free solution for treating a variety of conditions. It has been proven to be effective at reducing pain, swelling, and inflammation in Otitis conditions - consequently aiding in the healing process.

## How can my pet's ear infection (otitis) benefit from laser therapy?

Our pet's ears are highly sensitive and when infected or irritated, the ear canal can become swollen and painful. Your pet may show symptoms by shaking their head, and their ears may be painful to the touch and/or dirty and smelly. When this occurs, diagnostics and treatment become difficult and are often met with resistance from the pet. Adding laser therapy will enhance pain relief, reduce inflammation and swelling, and reduce instances of self-trauma, thus enabling you to follow through with the prescribed treatment plan. Most importantly, adding laser therapy can positively impact your pet's healing time.

Ask your veterinarian to see if laser therapy can be added to your pet's plan of care.

### About The Treatment

Relief and/or improvement is often noticed within hours depending on the condition and your pet's response.

We highly recommend adding this innovative approach to a wide variety of conditions as part of a standard of care treatment for ear infections. Laser therapy is non-invasive and many pets will exhibit relief of certain symptoms anywhere from a few minutes to within a few days of the initial therapy.

Our practice firmly believes that our mission is to keep our patients pain-free. Laser therapy offers another modality that is consistent with industry standards. Most importantly, laser therapy to your pet's treatment can improve your pet's quality of life during their golden years.
